

Amendments to the Claims:

1-62. (Cancelled)

506
F17
63. (Currently Amended) An image reproduction control apparatus,
comprising:

a storage unit using a detachable memory, the detachable memory storing a plurality of reproducible images and a reproduction instruction file, the reproduction instruction file including one or more file names specifying one or more images to be reproduced, the one or more file names in an order;

a reading section for reading the reproduction instruction file to determine the one or more file names specifying one or more images to be reproduced;

E1
a reproduction control section for controlling reproduction of the one or more images to be reproduced by reading, in order, the one or more images to be reproduced specified by the reproduction instruction file;

a display control section for controlling display, in a display unit, so that a user may confirm whether or not reproduction of the one or more images is to be performed, the display unit displaying, in order, one of (i) one or more thumbnail images, the one or more thumbnail images corresponding to the one or more images to be reproduced specified by the reproduction instruction file with a mark indicating whether or not each of the one or more images is to be reproduced or (ii) the one or more file names specifying the one or more images to be reproduced; and

an operation section for starting the reproduction in accordance with input from a user and for performing the reproduction of the one or more images to be

reproduced after confirmation by the user confirms that the one or more images specified by the reproduction instruction file are to be reproduced, wherein, in the confirmation, the one or more thumbnail images are reproduced as image data to be displayed.

64. (Previously Added) The image reproduction control apparatus of claim 63, further comprising a recording section for recording the reproduction instruction file in the detachable memory in accordance with user input.

E1
65. (Previously Added) The image reproduction control apparatus of claim 63, wherein said display unit displays the one or more images to be reproduced specified by the reproduction instruction file.

66. (Currently Amended) The image reproduction control apparatus of claim 63, wherein said display unit displays the one or more file names included in the reproduction instruction file.

67. (Cancelled)

68. (Previously Added) The image reproduction control apparatus of claim 63, wherein the reproduction instruction file includes one or more reproduction instructions, and one or more of the instructions is a print instruction.

69. (Previously Added) The image reproduction control apparatus of claim 63, wherein said display control section is operated in accordance with the attachment of said detachable memory.

70. (Currently Amended) A method of controlling image reproduction, the method comprising:

providing a storage unit using a detachable memory, the detachable memory storing a plurality of reproducible images and a reproduction instruction file, the reproduction instruction file including one or more file names specifying one or more images to be reproduced, the one or more file names in an order;

reading the reproduction instruction file to determine the one or more file names specifying one or more images to be reproduced;

controlling reproduction of the one or more images to be reproduced by reading, in order, the one or more images to be reproduced specified by the reproduction instruction file;

controlling display, in a display unit, so that a user may confirm whether or not reproduction of the one or more images is to be performed, the display unit displaying, in order, one of (i) one or more thumbnail images, the one or more thumbnail images corresponding to the one or more images to be reproduced specified by the reproduction instruction file with a mark indicating whether or not each of the one or more images is to be reproduced or (ii) the one or more file names specifying the one or more images to be reproduced; and

starting the reproduction in accordance with input from a user and for performing the reproduction of the one or more images to be reproduced after confirmation by the user ~~confirms~~ that the one or more images specified by the reproduction instruction file are to be reproduced, wherein, in the confirmation, the one or more thumbnail images are reproduced as image data to be displayed.

71. (Currently Amended) A computer-readable storage medium storing a program for executing a method of controlling image reproduction, the method comprising:

E1 providing a storage unit using a detachable memory, the detachable memory storing a plurality of reproducible images and a reproduction instruction file, the reproduction instruction file including one or more file names specifying one or more images to be reproduced, the one or more file names in an order;

reading the reproduction instruction file to determine the one or more file names specifying one or more images to be reproduced;

controlling reproduction of the one or more images to be reproduced by reading, in order, the one or more images to be reproduced specified by the reproduction instruction file;

controlling display, in a display unit, so that a user may confirm whether or not reproduction of the one or more images is to be performed, the display unit displaying, ~~in order, one of (i)~~ one or more thumbnail images, the one or more thumbnail images corresponding to the one or more images to be reproduced specified by the reproduction information file ~~with a mark indicating whether or not each of the one or~~

more images is to be reproduced or (ii) the one or more file names specifying the one or more images to be reproduced; and

E1 starting the reproduction in accordance with input from a user and for performing the reproduction of the one or more images to be reproduced after confirmation by the user ~~confirms~~ that the one or more images specified by the reproduction instruction file are to be reproduced, wherein, in the confirmation, the one or more thumbnail images are reproduced as image data to be displayed.

72-77. (Cancelled)
